

Sycor.OrderCockpit

The convenient interface for order processing in SAP.

You have all order processing elements at hand with the central, easy to use *Sycor.OrderCockpit* platform, allowing you to optimize your business processes and speed them up.

The *Sycor.OrderCockpit* supports you in all areas of order processing in your SAP system. A traffic light feature provides you with an overview of the delivery status of all orders, and allows you to perform various actions - such as arranging on order or initiating invoicing - without switching to a different interface. In addition, it allows you to keep an eye on the production status of an order.

The *Sycor.OrderCockpit* on the basis of SAP ERP provides you with an integrated tool which allows you to manage your entire order processing from a central location. The intuitive user interface can easily be adapted to your individual requirements and integrated into your existing SAP system in a short amount of time. You can access all important order processing

functions such as quotations, delivery notes, invoices, or customer master data sheets directly from the *Sycor.OrderCockpit*. You receive all current information on all customer data, such as the value of open orders and sales volume or important credit management data such as open items, dunning status and credit limit. Comprehensive alert functions allow you to react quickly in case of production problems, with both the production status and the delivery status for your custom fabrication being displayed in a traffic light format.

Microsoft data formats can be uploaded as documents and linked to all documentation types such as quotations, orders, and delivery schedules. This, for example, allows scanned-in customer orders or drawings to be linked directly to the process.

The transparency you gain through the use of the *Sycor.OrderCockpit* allows you to perform optimal planning, make informed decisions, and save resources and costs in the process. At the same time, your delivery performance is improved, thereby increasing customer satisfaction.

Your advantages:

- Starting various actions without changing screens
- Intuitive user interfaces which can be adjusted to your individual needs
- Comprehensive alert functions
- Documents are linked to the processes
- Transparency is created
- Direct access to all key order processing functions
