

The central tool for production planning in SAP.

You have all production planning and management elements at hand with the central, easy to use *Sycor.ProductionCockpit* platform, allowing you to optimize your business processes and speed them up.

Daily production planning and control in a production facility is complex. Production planners have to ensure minimal lead times and adhere to schedules while guaranteeing good capacity utilization and minimal setup costs. If, in addition, it is necessary to consider special tools which often form a bottleneck, then optimal planning becomes a daily challenge for all employees.

The *Sycor.ProductionCockpit* based on SAP ERP gives you an integrated planning with functions such as characteristics-dependent sequence/campaign planning, integrated tool administration, capacity overviews and alert functions. The intuitive user interface can easily be adapted to your individual requirements. The tool can be implemented for use in your existing SAP

Your challenges:

- Keeping lead times as low as possible and meeting deadlines
- Optimal use of capacity and minimized setup costs
- Consideration of special tools
- Huge manual entry workload

system in a short amount of time.

Planning becomes transparent for all departments with the aid of *Sycor.ProductionCockpit*. This, for example, allows a sales employee to inform himself about the current production sequence and situation at any time and to take countermeasures, if necessary. He can also access the specific customer order or the current demand and inventory situation directly. In production, a comfortable tool management is possible through SAP-Standard-Equipments with automatic generation of maintenance orders. The capacity planning can be performed efficiently under consideration of tool resources and order networks can be fully integrated. Comprehensive alert functions ensure a prompt reaction in production.

The transparency you gain allows you to perform optimal planning, make informed decisions, and save resources and costs in the process. This increases your delivery performance and the satisfaction of your customers.

Your advantages:

- Comprehensive alert functions
- Attribute-dependant sequence and campaign planning
- Capacity overview and tool management
- Intuitive user interfaces which can be adjusted to your individual needs
- Transparency is created across department boundaries
- The current demand and inventory situation can be determined
